STANDARDS

## Foreword

This Section of Part 2 of BS 6100 has been prepared under the direction of the Basic Data and Performance Criteria for Civil Engineering and Building Structures Standards Policy Committee.

A general introduction to and explanation of this glossary is given in Part 0 of BS 6100, which itemizes the Parts, Sections and Subsections into which this glossary is divided and provides a general alphabetical index of all the terms in the Sections and Subsections already published. Those using individual Sections and Subsections of this glossary are urged to consult Part 0 when doing so.

The other Sections of this Part are as follows:

- 2.1 Structural design and elements
- 2.2 Substructures. Earthworks. Foundations. Tunnels
- 2.3 Superstructures. Bridges. Large span structures
- 2.4 Highway and railway engineering
- 2.5 Hydraulic engineering and construction work
- 2.7 Public health. Environmental engineering
- 2.8 Pipelines and ducts

Terms are listed alphabetically in the index and are referred to by numbers which are found against the terms in the body of the Subsection. They are arranged in a classified order, each term having an individual number consisting of seven digits in two parts, the first of three digits, the second of four. The first three digits represent the number of the Part, Section and Subsection. The fourth digit represents the group of terms, the fifth digit represents the subgroup of terms, and the last two digits represent the place within the subgroup.

Alternative terms are given in medium type below the preferred terms with their status indicated by 'deprecated'. These terms are not individually numbered but are included in the index with a reference to the preferred term. Terms of more than one word, e.g. 'brushwood fender' are written in a direct style, not as 'fender, brushwood'. The inverted term is included in the index with reference to the direct term.

Italicized words indicate terms that are defined elsewhere in this Subsection.

**Compliance with a British Standard does not of itself confer immunity from legal obligations.**
