Aircraft — Joints for connecting crew members' regulator masks to oxygen sources

Aéronefs — Raccord destiné à relier les masques inhalateurs des membres de l'équipage aux sources d'oxygène

First edition - 1981-09-15

UDC 614.894.72:629.7:621.643.4

Ref. No. ISO 5887-1981 (E)

Descriptors: aircraft equipment, joints (junctions), oxygen circuits, couplings, filling devices, dimensions, dimensional tolerances

Foreword

ISO (the International Organization for Standardization) is a worldwide federation of national standards institutes (ISO member bodies). The work of developing International Standards is carried out through ISO technical committees. Every member body interested in a subject for which a technical committee has been set up has the right to be represented on that committee. International organizations, governmental and non-governmental, in liaison with ISO, also take part in the work.

Draft International Standards adopted by the technical committees are circulated to the member bodies for approval before their acceptance as International Standards by the ISO Council.

International Standard ISO 5887 was developed by Technical Committee ISO/TC 20, *Aircraft and space vehicles*, and was circulated to the member bodies in February 1980.

It has been approved by the member bodies of the following countries:

Austria Germany, F.R. Romania

Belgium Ireland South Africa, Rep. of

Canada Italy Spain
China Mexico Sweden

Czechoslovakia Netherlands United Kingdom

France Poland USSR

The member body of the following country expressed disapproval of the document on technical grounds :

USA
