AEROSPACE STANDARD

SAE MA4534

Issued 1993-09
Reaffirmed 2004-01

Socket Wrenches, Hand (Metric)

1. SCOPE:

This SAE Aerospace Standard covers high strength commercial sockets and universal sockets which possess the strength, clearances, and internal wrenching design so configured that, when mated with hexagon (6 point) fasteners, they shall transmit torque to the fastener without bearing on the outer 5% of the fastener's wrenching points. This document provides additional requirements beyond ANSI B107.5 appropriate for aerospace use.

Inclusion of dimensional data in this document is not intended to imply all of the products described therein are stock production sizes. Consumers are requested to consult with manufacturers concerning lists of stock production sizes.

1.1 Classification:

Sockets and universal sockets covered by this document shall be of the following classes and styles as specified:

a. Class 1 - Sockets, double hexagon (12 point)
   (1) Style A - Regular length
   (2) Style B - Long length
   (3) Style C - Mid length

b. Class 3 - Universal sockets, double hexagon (12 point)

2. APPLICABLE DOCUMENTS:

2.1 The following documents of the issue in effect on the date of invitations for bid or request for proposal form a part of this document to the extent specified herein.

2.1.1 SAE Publications: Available from SAE, 400 Commonwealth Drive, Warrendale, PA 15096-0001.

ANSI B107.5 Sockets Wrenches, Hand (Metric Series)

3. REQUIREMENTS:

3.1 General:

Unless otherwise specified herein, all dimensions and attributes shall be in conformance with ANSI B107.5.

3.2 Materials:

The materials used in the manufacture of the sockets and universal sockets shall be steel, the chemical composition and heat treatment of which shall be such as to produce tools conforming to the physical requirements specified herein. Failure under load shall not result in fragmentation of the socket. Powdered metal or cast steel shall not be used.

3.3 Marking:

The sockets shall be marked in a permanent manner with the country of origin and the manufacturer's name, or with a trademark of such known character that the source of manufacture may be readily determined. In addition, the tools shall be marked in a permanent manner with the nominal wrench opening. Marking methods shall be in accordance with AS478.

3.4 Hardness:

Sockets shall be heat treated to a hardness of 40 to 54 Rockwell C.

3.5 Test Loads:

When tested as specified, sockets shall withstand the applicable cyclic and proof test loads specified in Table 1 and Table 2 without failure or permanent deformation (set) which might affect the durability or serviceability of the sockets.

TABLE 1 - Class 1, Socket, Test Loads by SQ DR Size
(Torque in Newton-Meters)

Size	1/4 Proof	1/4 Cyclic	3/8 Proof	3/8 Cyclic	1/2 Proof	1/2 Cyclic	3/4 Proof	3/4 Cyclic
